The superiorities of

JP-33

Automatic X-ray Film Processor

Easy to *Install, Use* and *Maintain!*

JPI

JPI America, Inc. (New York, USA)

JPI's Commitment:
Continued development of excellence in radiology.

- The JP-33 was developed over 5 years ago and over 5000 units sold world wide.

- Since it's introduction to the U.S. market, dealers and users such as yourselves have had the first hand opportunity to transform the JP-33 into the superior processor that it is today. The JP-33 is the evolutionary result of our customers insights.

- For the past 3 years you have confirmed its reliability and durability by installing the JP-33 and calling it the best in it's class.

- While the competition has been concentrating on eliminating critical features from their processors to reduce price and are no longer investing in improvements. We at JPI continue to listen to our customers, and implement their feed back to escalate the JP-33 for continued excellence.

- Our investment insures us that we provide our customers with a competitively priced tabletop processor that is easy to use, install and maintain, without jeopardizing quality or eliminating features.
